Queen Mary University of London

Training guide for departmental administrators:

Allocating Students to Teaching Activities in Enterprise Course Planner (ECP) and Enterprise Timetabler (ET)

Page 1

1. Introduction

This training guide is intended for departmental administrators to work through the student to teaching activity allocation process in Enterprise Course Planner (ECP) and Enterprise Timetabler (ET), in a simple, step-by-step manner from which the underlying principles that that were explained and demonstrated in the accompanying training session should be reviewed and practiced. It assumes that users are familiar with the basic concepts outlined in the introductory Student Allocation training session, and have been set up appropriately in Authorisation Manager. It is designed to supplement the existing Enterprise user and training documentation.

Background

The 1314 academic timetable has mostly been finalised (teaching activities have been allocated locations, staff members, and timeslots). The next step in the QMUL timetabling process is to allocate students to teaching activities on a module by module basis. Over the past three weeks Activity Templates have been created for all teaching activities to enable these student allocations. This next round of training will be focused on two main areas:

- 1. Outlining the general student activity allocation process in ECP and ET
- 2. Working through allocating and un-allocating students to teaching activities

Note: You will only be able to allocate students to teaching activities that belong to modules from your department. Even if the student is from another department and they have chosen to study a module from your department, they will be enrolled on the module and therefor available for allocation to your department's teaching activities.

Key Definitions

A number of key Scientia timetabling definitions are listed in the table below and are referred to throughout this guide:

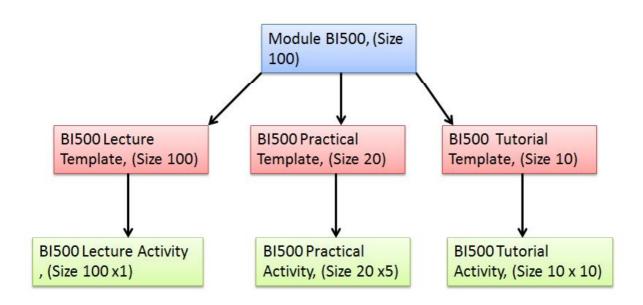

Scientia Term	Explanation
Teaching Activity	A teaching event that students attend from a module, such as Lecture, lab, tutorial
	or practical. All teaching activities that students are required to attend must be
	created from and linked to a genuine SITS module.
Activity Template	Activity templates are used to describe how each module is delivered from the
	perspective of a student taking that module. They provide a reliable mechanism to
	allocate students to teaching activities in a clash free manner and help to better
	structure the timetable database.
Student Set	A student set represents an individual student in the QMUL timetabling system.
Group based	The students enrolled on the module are divided into groups and are allocated to
teaching activity	one of the several activities that are linked to the module.
Non group based	All of the students on the module are required to attend the same teaching
teaching activity	activity. They are not subdivided into groups. For example Lectures or screenings
	are usually non group based, unless the size of module is too large to be
	accommodated in one venue.

Table 1: Key Definitions

3. Key Concept – Activity Templates

Activity Templates define how the teaching of a module is delivered from the perspective of a student studying that module. In the example in figure 1 below, the students enrolled on the BI500 module which is taught once a week to a large Lecture group of 100, split into smaller groups of 20 for Practicals, and then further split into even smaller groups of 10 for Tutorials. Three Activity Templates would be needed, one for the Lecture (size 100), one for the Practicals (size 20) and one for the Tutorials (size 10).

Figure 1: Activity Template Structure

Teaching activities are then created from the activity templates (or in QMUL's case the templates have been created by the central timetabling team and linked to the relevant activities). With the structure that is set out in the example above all students on Module BI500 will attend the same lecture, they will be allocated to just one of the 5 practicals, and just one of the 10 tutorials. In the scenario above it is impossible for a student to attend more than 1 of the BI500 practicals. If this was in fact the requirements a separate template would have to be crated for each activity the student had to attend. (There would be: five BI500 Tutorial Templates in the example above, each linked to just the one individual activity.)

Note: If there is one activity linked to the template all the students attend the one activity, if there are more than one, the students are divided up and allocated to one of the group based activities.

Note: Any students that are not allocated to activities or not correctly allocated to activities will not have an accurate personalised timetable this could cause them to miss classes and not having a student experience comparable to their peers.

4. Student Allocation Process

One to one meetings were held with the timetabling administrators from the Mile End Schools and the following overall student allocation process was agreed:

- A one off bulk allocation of students to non-group based teaching activities (lectures, screenings, etc) will be performed by the central room booking team for continuing students on an agreed date. All students on the genuine teaching activities (from SITS) will be allocated to their teaching activities where there is enough space (activity planned size) and their schedule is clash free.
- 2. Schools will then review the results of this initial allocation and allocate any students that failed to allocate to the non-group based teaching activities for the reasons outlined in 1 above.
- 3. Schools will then allocate students to group based teaching using the activity templates on a module by module basis.

Table 2: Overview of the two methods of student allocation to teaching activ	vities
Table E. Over new of the two motious of stadent anotation to teaching det	/10/05

Type of teaching activity	Allocated Steps
Non-Group based teaching activities with no student choice. Such as Lectures, one off seminars.	 Bulk allocation by Space Management Unit via the Enterprise timetabling system. Reviewed and finalised by the schools in ECP and ET
Group based teaching activities where students have a choice of which teaching activity to attend. Such as seminars, tutorials, IT and or practical labs.	 Auto Allocation in ECP by School administrators using one of the four bulk allocation methods that are detailed in table2 (Randomly, Evenly, Evenly, by module choice). Individual allocations adjusting the bulk allocations to fine tune them.

Table 3: The Four Bulk Allocation Methods in ECP

Allocation Method	Explanation
1. Allocate by Module Choice	If this option is selected, the allocation process will attempt to allocate student sets with similar modules to the same activities. The user should bear in mind that in the case where all sets are unallocated the first set to activity allocation made will be arbitrary since there is no existing allocation to guide the process. If the user wishes to guide allocation towards specific activities, this can be achieved by making some allocations by hand. Once a set is allocated to an activity the allocation process will tend towards allocating sets with a similar module choice to that activity.
2. Allocate by	If the user elects to allocate student sets by name then the allocation
Name	process will begin with allocation of the student set that is first in the list when sorted alphanumerically and allocate that set to the first available

	activity that has sufficient room for the set. The process will then move to the next student set and so on.
3. Allocate Evenly	This allocation method will try to equally distribute the student allocations across the activities on the template. This option is used in conjunction with the minimum fill value.
4. Allocate Randomly	This allocation method is completely random.

Write Back and Refresh

As you make any changes in ET you will need to write them back to the database to commit them to the server by pressing the write back button. If the Write back icon is greyed out there are no changes to save and send to the server.

To view the changes that your colleagues have made and written back to the shared database you must refresh your view of the system by pressing this button

Note: Changes are not safe until they have been written back to the server. If you want to discard the changes you have been making do not write them back, exit the application and do not save the image file if prompted.

5. Getting Started

Follow the steps below to log in to the system.

a. Log into your Virtual Machine and then open up your internet explorer web browser and enter the link below as illustrated in figure 2 below. Or click on the Scientia shortcut on the VM desktop.

https://timetablesportal.gmul.ac.uk/Scientia/Portal/Main.aspx

Figure 2: Scientia Enterprise link

b. The Scientia Enterprise Timetabling system's log in screen will then load and prompt you to log in. Enter your University user Id and password and press enter or click the logon button, as illustrated in figure 3 below:

Figure 3: Scientia Enterprise login

Enterprise Foundation

If you cannot log in to the Enterprise screen then contact: The IT helpdesk on: ext 8888, itshelpdesk@qmul.ac.uk

6. Loading the Enterprise Course Planner (ECP) Application

After logging in successfully, the Enterprise Portal screen illustrated in figure 4 below will become visible. Follow the steps below to open the ECP application.

- a. Ensure you have selected the correct database/academic year by single left clicking on the 'SCI1314' tab at the top of the screen. The name of the selected database will turn white after it has been selected.
- b. To load ECP single left click on the ECP icon as illustrated in figure 4 below. If you double left click the ECP application will launch twice.

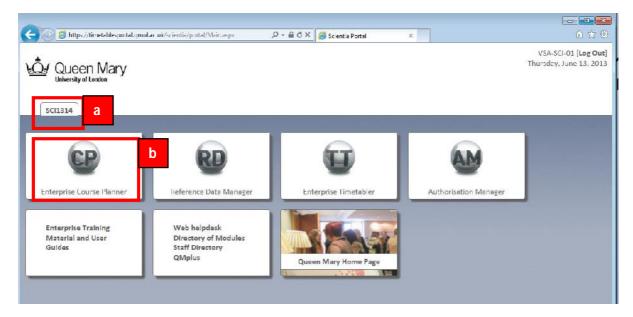

Figure 4: The Enterprise portal

- c. If the ECP application is being run for the first time the software will need to be installed on your machine, click install if needed.
- d. A series of loading screens will then appear and after a few minutes ECP will load as illustrated in figure 5 below.

7. Filtering the ECP application and Finding your Templates

To view and edit your department's course planning information follow the steps detailed in this section.

- a. Maximise the main ECP screen by clicking on the maximise icon in the top right hand corner of the screen.
- b. Left click on the Department(s) filter box to activate it
- c. Select your school or departments(s) from the list in the Unselected box
- d. Click on the right facing arrow and move the department you require into the Selected box
- e. The department filter list is now finalised in the selected box
- f. Click anywhere on the application's main screen (that isn't an action button) to apply the filter

Figure 9: Activity Template Window –Re- Ordering Key Columns

- b. Working module by module select the Lecture Template by left clicking on it.
- c. Next press the "Template Allocator" button

- d. The allocation screen will then open for the selected template. The student enrolled on the module, that the Activity Template has been created for are available for allocation on the left had side of the screen. Students in Bold black font have not yet been allocated to an activity.
- e. There is also no tick in the "Allocated tick box" that corresponds to the students in the list.

- f. The activity(s) that have been associated with the selected Activity Template are listed in the middle of the screen. This will match the number of existing activities on the previous screen.
- g. The "Total Size" of the activity is its planned size (as specified by the schools during the planning stage of the timetable construction period) and the "Real Size" of the activity (the actual number of students that have been allocated to the activity) are displayed side by side at the bottom of the screen.

Figure 11: Reviewing the Bulk Allocation

o. To find all the unallocated students, move to the top right hand corner of the "Allocated" column header and select the "Unchecked" option. This will filter the screen to just the students that are unallocated on this template.

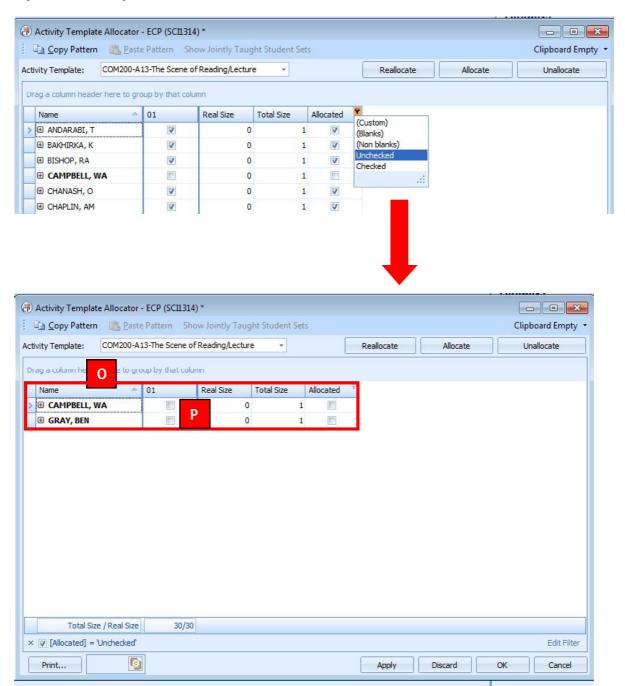

Figure 12: Filtering to the Unallocated Students

- p. To allocate the remaining students double left click on the activity tick box that corresponds to the unallocated students one by one.
- q. Remove the "Unallocated" filter

r. As the remaining students are allocated they return to normal font. If the real size of the activity has gone above the planned size (it has become overloaded) and the sizes will change to red font.

- v. The allocation window will then appear for the seminar activity template.
- w. This is a group based activity template, where the students attend one of the multiple activities on this template.
- x. To bulk auto allocate the students to one of the two activities on the selected template press the "Allocate" button, select the relevant allocation method and then review the results as before.

Allocating Students in Enterprise - Guide

9. Manually allocating Individual Students to Activities

The students can be manually (individually) allocated to teaching activities by following the steps outlined below as illustrated in figure 15 below.

- Double left click on the student/activity tick box as required. a.
- b. To unallocate a student from the activities on the template select the students by left clicking on the blue block to the left of the desired student names.
- c. Press "unallocated"

В

d. Press OK to return to the main ECP window

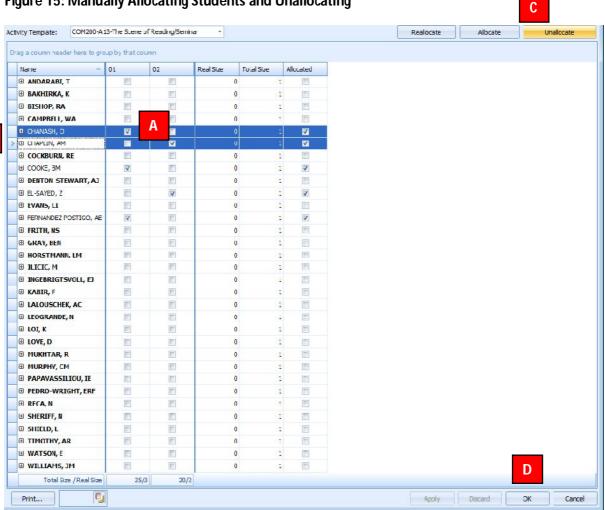

Figure 15: Manually Allocating Students and Unallocating

Allocating Students in Enterprise - Guide

e. Write back from the ECP main application screen to save the allocation changes.

Figure 16: Writing back changes and Refreshing the ECP Dashboard

f. As you are making changes to student allocations in ECP the dashboard greys out to indicate that a change has been made. To refresh the ECP dashboard –recalculating the course planning dashboard, you will need to go to Dashboard | Refresh | Refresh All. **This is not a database refresh.**

10. Filtering Students by their Programme of Study

The allocation window can be filtered by the Programme of Study that the students are enrolled on. This could be helpful if you wanted to keep students from the same Programmes together in the same activity. To do this following the steps outlined below as illustrated in figure 17 below.

- a. Right click on the Name column header
- b. Select the "Column Chooser" option

Figure 17: Filtering Allocations by Students Programme of Study

11. Viewing Individual Student Timetables in ET

Once a student has been allocated to all of their timetable activities in ECP, it is possible to view and adjust their individual schedule in Enterprise Timetabler. To do this following the steps outlined below as illustrated in figure 19 below.

- a. Open Enterprise Timetabler
- b. In the Template Allocator screen in ECP click and select the relevant student.
- c. Right click on the highlighted student and select "Show Timetable"

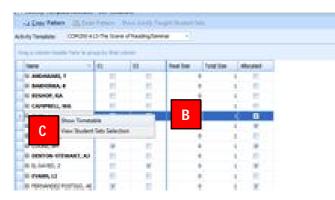

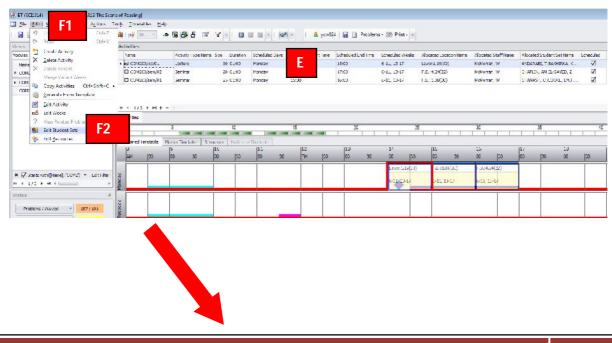

Figure 19: Student Timetable click through

d. The selected student's timetable is then displayed in Enterprise Timetabler and can be reviewed

12. Monitoring Student Allocations

As students are changing modules, it will be necessary to regularly check for students that have become unallocated from activities as they are no longer taking the associated module. To filter to unallocated students follow the steps outlined below as illustrated in figure 22 below.

- a. Press the "Show" button next to the "with unallocated student sets" filter value on the Activity Template panel.
- b. The Template Allocator window will then open, with only the templates that have student sets that require allocation in view. These can then be reviewed template by template and allocations made as necessary.

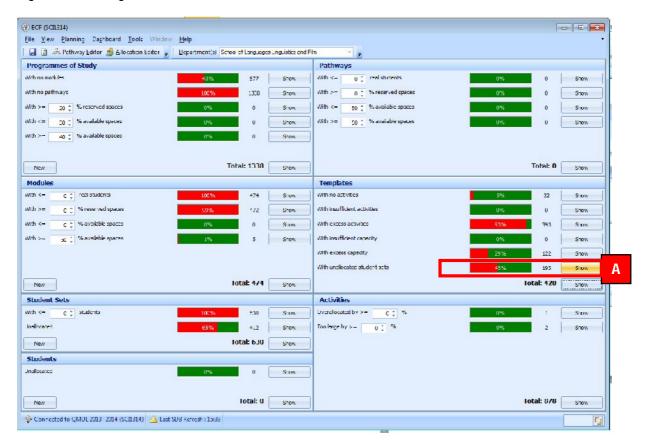

Figure 22: Finding Unallocated Students

13. Clashing Student Allocations

It may be necessary to deliberately clash a student's timetable. Student allocations can only be clashed in the Enterprise Timetabler application. To clash student allocations follow the steps outlined below as illustrated in figure 23 and 24 below.

- a. In Enterprise Timetabler select the activity that needs to have the student clash associated with it.
- b. Go to Tools | Constraints to open the constraints window
